

Prevention in the eye care is important for everyone as vision affects so many aspects of the life. It can be even more important for those who may be affected by a hereditary eye condition or suffer from an illness that may affect eyesight. Eyesight can be affected by not merely the way we use our eyes, but also the way we use our organs. Liver and gall bladder problems, Diabetes, Hypertension, Kidney problems, Muscular degeneration, Nerve cell degeneration, and Circulatory problems are just a few of the issues that can drastically change your eyesight.

Our Program is looking for individuals who wish to improve their vision or prevent vision deterioration caused by the effects of artificial light, over-stressed eyes, television and computer monitors, night-time work and driving, or medical conditions. If you are experiencing dry eye or tearing, light sensitivity or difficult focusing, then you may be a perfect candidate for the participation in this program.

Through our Program we aim to examine the effects of holistic health practices and biological medicine in the prevention of ocular degeneration and improvement of vision in individuals who may have already experienced ocular degeneration or deterioration of vision.

How does it work?

Data collected over the past 85 years demonstrate the effectiveness of electromagnetic energy for the purposes of getting an access to so called biological windows to stimulate long-lasting positive changes in your bodies at the cellular level.

The Program will use this research to stop and then reverse the effects of ocular stress and degeneration by making it possible for your body to protect and heal itself rather than by using any artificial means.

How often will I need treatments?

You should receive the minimum of 5 treatments per week, each about a half hour in duration, and on the day of the final treatment, you will also have to fill out a questionnaire and get your vision reassessed.

Do I have to come in everyday?

No. This Program employs a line of devices designed also for home use. If you wish, you can complete the treatments at home. You only need to come to the clinic once a week for the vision test and questionnaire.

How long do I have to undergo treatments?

You must complete 16 full treatments cycles, (5 days of treatments plus the questionnaire) however you can do it over a period of 20 weeks. We have planned this to accommodate holidays and illnesses when you may not be able to receive treatments.

How much does it cost?

This program is offered to you at a fraction of the cost of a regular visit. You will not only radically change your vision and your way of living, you will save money!

How soon will I see results?

Our experience in data gathering in the European Union shows how amazing the results can be; most participants see the changes just in 4 weeks! Moreover, our treatments work not merely with the eyes, but with all organs and systems that can affect your eyes. Therefore, you will not only see better, you will live better.

How long will the results last?

The results should last indefinitely, so long as you are taking care not only of your ocular health, but of your whole body. If you begin to experience any degenerative symptoms you can restart treatments until your vision is recovered.

How can I learn more?

Each centre participating in this program will hold weekly information sessions to provide you and your loved ones with all the knowledge you need to make an informed decision. You can also learn about our international education programs
